MARKET REPORT

Italy’s road to recovery

Following one of its most serious recessions ever, the Italian construction machinery sector appears to be on the road to recovery. Patrick Smith reports.

The construction machinery sector in Italy in recent years has experienced one of its most serious recessions ever. But, according to recent figures from Unacea, the Italian Construction Equipment Association, the sale of construction equipment locally increased over the first nine months of 2017. The organization says that 7,064 units were sold in the Italian market, up 13% compared to the same period of 2016. The figures consisted of 7,551 earthmoving machines, also up 12% year-on-year. There was also a positive trend for the road equipment sector, up 14% with 3,168 machines sold.

Unacea says this is a good performance for the Italian production of construction equipment that reached €2.6 billion in 2016, and which is forecast to see a moderate increase when the 2017 figures are finalised. Export levels also remain high with a national range of 75% of production exported, and peaks of up to 95%.

“National industry and market continue to show signs of recovery. However, there are still several missed opportunities,” says Paolo Venturi, president of Unacea.

“For a long time, we have been asking the municipal administrations to recognize the issues of emissions in urban centers resulting from the use of obsolete construction equipment.

Measures introduced in 2017 on the matter, which consider emissions from agriculture and domestic heating in addition to vehicular traffic, would seem to go in the right direction. But, the construction equipment sector remains excluded, still with no kind of restriction to the use of obsolete machines, and that would be a great contribution to improve the air quality.”

Such figures are good news for Italy, and they are backed by Samoter, the construction equipment show held in Verona and organized by Veronafiere, which, with associated events Asphalex and Transporex Logistics, attracted 84,000 industry professionals from 66 countries in 2017. The next event is in 2020.

The January 2018 Seminar Outlook, a monthly report monitoring foreign trade shows that the trade balance between imports and exports of all construction equipment for January-October 2017 was a positive €1.522 billion compared to €1.4 billion in the same period in 2016.

Among these statistics, the export of aggregate preparation machinery showed a significant increase but imports were strong.

Volvo Construction Equipment is upbeat about prospects and says that the Italian aggregates sector is recovering after a long and deep depressed period.

“We saw a positive trend for construction equipment in 2017 in quarrying, for example, marble or basil, as well as in the industrial and recycling sectors,” says Stefano Tocchiardi, managing director of Volvo CE Italia.

“The Italian construction equipment market grew by about 20% in 2017, mostly due to the fiscal incentives for tax incentives called super-ammortamenti and super-ammortamenti, which translated into English are hyper and super depreciation,” he says.

“Such measures and incentives give the possibility to depreciate at 144% (super depreciation) and 256% (super depreciation) the new capital goods that Italian companies buy. The aim of this measure is to incentivize Italian firms to invest more. However, the depreciation rate is applicable only to high-tech purchases, these capital goods that are part of Industry 4.0.

“We expect to see a positive trend for construction equipment in 2018 and the market will grow about 10% thanks also to the hyper and super depreciation fiscal incentives that are extended into 2018. Quarrying aggregate activities and the industrial and recycling sectors will consolidate the positive trend registered in 2017.”

“The most requested equipment in 2017 has been compact excavators and CPVE excavators medium and large platforms.”

The company covers the Italian construction market with branches and an independent sub-dealer network.

ed at its four branches and three sales offices, both owned by Volvo CE Italy and 22 independent sub-dealers. Concerning service, it covers the Italian market with about 50 workshops.

Asked how he sees 2018 in the Italian market, Dei Carlo (traditional) says, "2018 will have a positive construction equipment trend and the market will grow by about 10%.

In Italy, mining and quarrying survey results are disseminated by the National Institute for Statistics (ISTAT), and in its most recent post the years 2013, 2014 and preliminary estimates for 2015 are investigated.

"Considering the fragmented context of mining and quarrying statistics in Italy, and a growing need for information at national and international level on the issue, this survey was designed by Istat and BIPRA (the Italian National Institute for Environmental Protection and Research) in 2014.

"Due to the importance of its context, mining and quarrying extraction surveys have been included in the National Statistical Program. It started for the first time in 2015 with the aim to produce official statistics to strengthen knowledge frameworks on mining and quarrying activities carried out at regional and national level, and on environmental pressures linked to the exploitation of non-renewable natural resources," says Istat.

In 2015, the number of mining and quarrying extraction sites amounted to 9,936, a drop of 5% compared to 2013. Mining sites totalled 3,134 and quarrying sites totalled 6,216.

"Municipalities with at least one extraction site were 7,196 (26.3% of all Italian municipalities).

"In 2014, total extraction of minerals from mining and quarrying amounted to almost 185.3 million tonnes, with an overall decrease of 4.8% over the previous year. Quarrying minerals extraction was equal to 172.9 million tonnes and mining minerals extraction to 12.5 million tonnes, respectively decreasing by 3.4% and 16.3% compared to 2013."

A recent move in the sector has seen HeidelbergCement subsidiary Talcerimenti complete the acquisition of Cementi RAI, a transaction with an enterprise value of €316 million.

"With the acquisition of Cementi RAI we significantly improve our nationwide presence in Italy," says Dr Bernd Scholz, chairman of the managing board of HeidelbergCement.

"For Talcerimenti, the acquisition is a unique opportunity to grow and consolidate its position in the Italian market. We see strong recovery potential in Southern Europe and especially in Italy over the coming years. With this acquisition we are very well positioned to create value through synergies, efficient processes, and the offer of high-quality and innovative products. The acquisition is part of our strategy of disciplined growth and increasing shareholder returns."

Another company with a presence in Italy is Metso, and Angelo Luisi Gardei del Val, distribution business manager for Spain and Italy at Metso, says that in spite of the help from the Italian government, in terms of taxes and super depreciation, the behaviour of the market is closer to present.

"The demand for equipment remains stable and flat but the perspective is positive," says Angelo Luisi Gardei del Val.

We have a strong presence in Italy and we are prepared if the market wakes up. We understand that the best approach to the Italian market is through local dealers.

"The demand for equipment is being driven by the replacement of the very old machinery and small refurbishment which provide more efficiency without big investments."

Asked what type of equipment in most demand, he says that it is clearly the medium and small sizes in all ranges of machinery.

One of Italy’s biggest experts in terms of quarryed material, in marble, is还是 highlighted at the annual Marmomac event in Verona, again organised by Tomar Asia (26-29 September 2018), and by the world-renowned Carrara producing quarries which have provided marble for the statues of Michelangelo among others.

Marmomac, the leading global event for the natural stone industry, represents the entire supply chain, from raw material to semi-finished and finished products, from processing machinery and technology to applications of stone in architecture and design.

It features many works in marble, and prior to its 2017 event, it produced figures showing that the sale of rough blocks, both semi-finished and finished marble materials, totalled €692 million (+3.7%), while machinery and technology also performed well, posting €640 million (+26.7%) in the first half of 2017.

The Italian stone industry boasts more than 3,200 companies and 32,000 employees, according to CONINDUSTRIA MARMO CALCINARA data, and in 2016 posted production worth €3.9 billion euros, 74% of which was exported.

Indeed, at the Carrara marble quarries of Versilia, Gaggi and Fantiscritti in the Italian Apa, increasing use of modern equipment has helped improve operational efficiency and productivity.

The mobile equipment is used to remove contaminants, which themselves are valuable products, from non-block marble production. (See full report in Aggregates Business Europe; March–April 2018, p.31.)
