SAMOTER 2017 for Magni TH

© 24/01/2017 ■ Events News, News, Press Release

Magni Telescopic Handlers will be present at the 30th edition of Samoter, the reference Italian Fair for the construction equipment market. The decision to participate in this event was mainly taken owing to the strong international nature of the Fair in the past years and that certainly makes the idea of being a part of it appealing: it is, however, a meeting point also for hirers and construction companies and not present on Italian territory. Our goal will be to show visitors the potential and versatility of our machines; to let them have first-hand experience of the quality of the components and the technological innovations that we offer, such as the entirely pressurized cab with touch screen for easy and instinctive use.

We'll have 4 models of our telescopic handlers on display: 3 will be part of our RTH range, which is characterised by the 360° rotation of the turret, which include working heights from 18 to 39 metres; and 1 will represent our TH range, characterized by vehicles with fixed boom and front stabilizers, which improve the performance; this range is the latest on the market and will initially include 3 models with 10 to 20 meters lift height.

Two electric scissor platforms will also be on display, a product forming part of the recent Magni offer, but definitely complementary to the current solutions for working in the field of building construction or renovations. Visit us at Area B – Stand 29 – 32 to see our offer with your own eyes!
