

Scaligera Service at Samoter

By Editorial Team - february 17, 2017

At the next Samoter show, Scaligera Service, a Verona-based rental company will exhibit its 10th platform CTE ZED 21.2 JHV equipped with the S3 stabilization system.

Presented as a world premiere at Bauma 2016, the ZED 21.2 JHV offers a working height of 20.6 m, a range of 9.9 m and a load capacity of 300 kg. It incorporates the new H S3 stabilization system which adapts in real time automatically to the conditions of use, load and position of the basket.

This sizable asset prompted Scaligera Service to place an order for a 10th unit. "This is an important function that allows for greater stability in the placement of stabilizers and will be highly valued in building, maintenance of green spaces and maintenance, and more and more customers are demanding capacity. The load capacity of 300 kg is also an asset," explains Mauro Brunelli, owner of Scaligera Service and president of Assodimi / Assonolo.

The CTE ZED 21.2 JHV nacelle will appear at the Samoter show from 22 to 25 February on the IPAF stand for a live demonstration.
