Ammann's Rammers, Plates, Compactors and Plant featured at SaMoTer in Italy

Ammann will be showcasing their product line at this year's SaMoTer building machinery exhibition in Verona, Italy, from 22-25 February 2017.

The family owned company has started in 1869 and Hans-Christian Schneider, the current Ammann CEO, is the sixth generation to run the family business. Over the 150 years of Ammann's history technology has evolved and now their plant and machinery deliver productivity that wasn't even dreamed of in 1869.

Ammann has a global reach and expansive product line ranging from small hand-operated vibratory plate compactors to fully assembled asphalt plants. A common thread through all products is the utilisation of technology that helps business owners overcome challenges and ultimately improve their profitability.

Ammann will have both an indoor and outdoor booth to accommodate its varied product offerings. Among the Ammann products on display will be:

APF 1240 Vibratory Plate
