HL960A wheel loader – the start of a new series of wheel loaders.

Hyundai Construction Equipment Europe (HCEE) scoops Samoter Technical Innovation Award, in the **'Medium Wheel Loaders' category**, for the new **HL960A wheel loader** during the Samoter Innovation Award ceremony, held at the Hotel Due Torri in Verona on 23rd January.

Bringing the winning team to Italy!

The award-winning HL960A machine will take centre stage on the Hyundai booth at Samoter 2020. Visitors to the Hyundai booth will discover why this Stage V wheeled loader was awarded the Samoter Technical Innovation Award.

Exciting features for the next generation of wheel loaders It comes as no surprise that the HL960A won this highly regarded award. The state-of-the-art machine is packed with high-end features and functions. The machine boasts many leading technological innovations – which include better fuel efficiency, enhanced safety, longer uptime and improved fleet management.

The birth of the new A-series: more than simply being Stage V compliant The A-series stands for machines that comply with the European stage V emission levels. Hyundai has driven product development to a level where it can proudly say it by far exceeds the market requirements to offer to its broad customer base a new range of machines delivering a maximum in performance, enhance productivity, add crucial safety features, improve uptime management and uptime of the machines while at the same time stay convenient for the operators – in short: the birth of the new A-series.
